

According to Gartner, having current and effective recovery plans is the key to success during an outage or disaster, and are 'ground zero' for effective crisis and business recovery

Business Continuity Solutions

Alliance knows how important it is to keep the most valuable part of your company, your Data - SAFE

We can provide powerful solutions that minimize downtime and ensure business continuance in enterprise data environments.

Your Business Simply can't Afford Downtime, which means you're Faced with the Daunting Challenges of Keeping Critical Data ready and available; even in the Face of System Failures, User Errors or Natural Disasters

To keep your business up and running all the time you need resilient back-up solutions that offer total availability and allow you to recover quickly and completely from all kinds of disasters and system failures.

Alliance supports back-up and disaster recovery plans with simple yet powerful, highly dependable solutions that deliver data security, high availability and rapid data recovery.

Alliance can provide your business with sophisticated Continuity and Recovery solutions that keep your critical data safe, protected, and available. We utilize snapshot technology that enables you to recover frequently used primary data almost instantly through replication technology that allow you to restore data to other locations quickly and efficiently. Together our Continuity and Recovery solutions make it possible to:

- ✓ Make your data more available by adding intelligence to your primary and secondary storage infrastructures.
- ✓ Backup and recover data completely and cost effectively through the use of integrated disk and tape backup solutions.
- ✓ Create unlimited data snapshots based on specific points in time or as often as necessary in order to quickly recover lost or damaged data.
- ✓ Easily recover the loss of data even in the event the core operating system becomes corrupted.
- ✓ Automatically replicate data to different locations to provide automated failover in the event of system failure or disaster.
